

Kaine Zhu 朱璽

AI Applications · Product Development · EdTech

AI engineer combining machine learning research, product development and staff training. Works across requirements, UI/UX, integration and release with AI agents, and turns practical methods into reusable workflows and learning materials.

Core Capabilities

AI & Systems

Python, LLM
applications, APIs, data
workflows

Product & Interface

Requirements, UI/UX,
full-stack apps, Electron

Research & Analysis

Machine learning,
features, time series,
validation

Adoption & Training

Training, materials,
stakeholder
communication

Experience

Kang Hsuan Educational Publishing Group / Kang Chiao International School

AI Engineer / Digital Learning Engineer | Jul 2026 – Present

- Builds and refines an AI needs survey, tool directory and prompt generator to support requirements gathering and staff AI use.
- Delivered two Kuse AI staff workshops on August 25 and 28, 2026, with presentations, guides and exercises adapted to participants' AI experience.
- Plans short AI training videos and learning schedules for teachers and administrative staff; develops materials and reusable templates.

Selected Recent Work

LumaReader Released

Personal product | Markdown reading, editing & PDF export

- Developed a local-first Markdown app with folder libraries, Mermaid, KaTeX, media previews, themes and interface languages.
- Refined source/preview editing, undo/redo and PDF export with page breaks, optional footers and frames.
- Released v1.3.1 on GitHub with macOS, Windows and Linux packages, alongside a web presence.

github.com/kainnne/Kainnne-LumaReader

Collaboration & Studio Planning In planning

Exploring initial collaborations and a potential studio for AI applications, product development and adoption services. Scope and operating structure remain in planning.

WikiNB

Personal edition | Markdown knowledge base & AI study assistant

- Integrated sign-in, note synchronization and full-text browsing to organize Markdown notes into a maintainable knowledge system.
- Connects AI conversations with note workflows for knowledge organization, review and project context retention.

wikinb.kainnne.com

ScopeCut

Project scoping tool | AI development workflows

- Designed guided input and scope refinement to turn conversational ideas into Project Contracts with goals, constraints and acceptance criteria.
- Connected a local Bridge with WikiNB to link project planning and document storage.

Research Experience

National Taiwan University

Bioenvironmental Systems Engineering
Research Assistant
Sep – Dec 2025

Developed the model architecture and Python implementation of a real-time flood early-warning system. Packaged models and designed data transmission workflows to support partner integration with government web platforms.
Tracked project progress and coordinated requirements with government agencies and technology partners. Separately continues research collaboration on LLM applications in ESG.

National Sun Yat-sen University

Marine Environment and Engineering
Research Assistant | Jan 2026

Analyzed data patterns and feature relationships to inform predictive model improvements and research design.

Master’s Research

Structural Engineering x Machine Learning

Used LS-DYNA simulation data to predict maximum and permanent deflections of corrugated blast walls under explosion loads. Conducted preprocessing, feature engineering, model tuning and validation, and feature importance analysis.

Education

National Sun Yat-sen University

M.S., Marine Environment and Engineering
2023 – 2025

National Sun Yat-sen University

B.S., Marine Environment and Engineering
2019 – 2023

Creative Work & Leadership

Former chamber music club president with experience in concert planning and production, composition, conducting and instrumental performance.

Released the original album Everything Before 24 in 2026; continues working on music and writing.
